

APPLICATIONS

Nano invisible nonwoven (special for hydrating mask) can be used for manufacturing different types of cosmetic / skincare masks (e.g. facial masks, eye masks, neck masks, hand masks, etc.) to combat skin dehydration, improve skin elasticity, and provide a radiant complexion. These masks are suitable for all skin types, especially beneficial for dry, dehydrated, or dull skin. They are designed to provide intense moisture to the skin, enhancing hydration levels and improving skin health.

NANO INVISIBLE NONWOVEN

SPECIAL FOR HYDRATING MASK
TNCA-15

KEY FUNCTIONS & BENEFITS

HYDRATION

Formulated with hyaluronic acid, glycerin, and squalane that deeply moisturize the skin, creating a barrier to lock in moisture

MOISTURE BARRIER REPAIR

Strengthen the skin's natural moisture barrier, preventing water loss and enhancing skin resilience

SOOTHING & CALMING

Formulated with soothing and skin calming ingredients to calm irritated skin and reduce redness

SKIN ELASTICITY IMPROVEMENT

Improve skin firmness and reduce the appearance of fine lines and wrinkles

RADIANT COMPLEXION

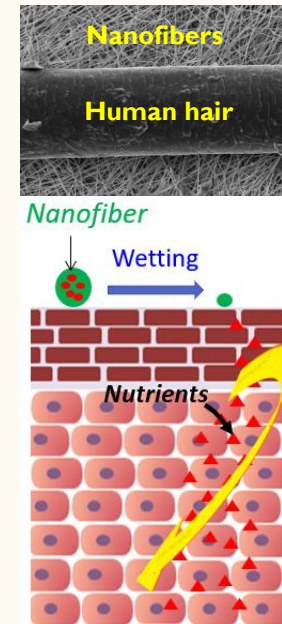

Help achieve a more youthful and radiant appearance by plumping up the skin

SUITABLE FOR VARIOUS CONDITIONS

Effective in both dry climates and during harsh weather conditions like winter

ADVANCED TECHNOLOGIES

NANOFIBER TECHNOLOGY

- ✓ Load substantial amount of nutrients within dry nanofibers, thus maintaining the stability of the nano mask without the use of preservative
- ✓ Trigger release of nutrients immediately upon moisturization due to the extremely short diffusion distance between the core of the nanofibers and their surface, thus leading to quick skincare effect
- ✓ Develop an extremely high concentration gradient at the interface between the nano mask and your skin due to the super high specific area of the nanofibers, thus achieving an incredibly high skin penetration
- ✓ Disappear completely within a minute, thus offering a travel-friendly design for on-the-go skincare

MOISTURE LOCKING & COOLING TECHNOLOGY

- ✓ Retain moisture in the skin for long-lasting hydration
- ✓ Prevent transepidermal water loss
- ✓ Provide a refreshing and cooling sensation upon application, thus enhancing the overall experience
- ✓ Ideal for use after sun exposure or during hot weather
